The Carbon Farming Solution Eric Toensmeier 2016-02-22 Agriculture is rightly blamed as a major culprit of our climate crisis. But in this groundbreaking new book, Eric Toensmeier argues that agriculture—specifically, the subset of practices known as "carbon farming"—can, and should be, a linchpin of a global climate solutions platform. Carbon farming is a suite of agricultural practices and crops that sequester carbon in the soil and in aboveground biomass. Combined with a massive reduction in fossil fuel emissions—and in concert with adaptation strategies to our changing environment—carbon farming has the potential to bring us back from the brink of disaster and return our atmosphere to the "magic number" of 350 parts per million of carbon dioxide.

Toensmeier's book is the first to bring together these powerful strategies in one place, including in-depth analysis of the available research and, where research is lacking, a discussion of what it will take to get us there. Carbon farming can take many forms. The simplest practices involve modifications to annual crop production. Although many of these modifications have relatively low sequestration potential, they are widely applicable and easily adopted, and thus have excellent potential to mitigate climate change if practiced on a global scale. Likewise, grazing systems such as silvopasture are easily replicable, don't require significant changes to human diet, and—given the amount of agricultural land worldwide that is devoted to pasture—can be important strategies in the carbon farming arsenal. But by far, agroforestry practices and perennial crops present the best opportunities for sequestration. While many of these systems are challenging to establish and manage, and would require us to change our diets to new and largely unfamiliar perennial crops, they also offer huge potential that has been almost entirely ignored by climate crusaders. Many of these carbon farming practices are already implemented globally on a scale of millions of hectares. These are not minor or marginal efforts, but win-win solutions that provide food, fodder, and feedstocks while fostering community self-reliance, creating jobs, protecting biodiversity, and repairing degraded land—all while sequestering carbon, reducing emissions, and ultimately contributing to a climate that will remain amenable to human civilization. Just as importantly to a livable future, these crops and practices can contribute to broader social goals such as women's empowerment, food sovereignty, and climate justice. The Carbon Farming Solution does not present a prescription for how cropland should be used and is not, first and foremost, a how-to manual, although following up on references in a given section will frequently provide such information. Instead, The Carbon Farming

Solution is—at its root—a toolkit. It is the most complete collection of climate-friendly crops and practices currently available. With this toolkit, farmers, communities, and governments large and small, can successfully launch carbon farming projects with the most appropriate crops and practices to their climate, locale, and socioeconomic needs. Toensmeier's ultimate goal is to place carbon farming firmly in the center of the climate solutions platform, alongside clean solar and wind energy. With The Carbon Farming Solution, Toensmeier wants to change the discussion, impact policy decisions, and steer mitigation funds to the research, projects, and people around the world who envision a future where agriculture becomes the protagonist in this fraught, urgent, and unprecedented drama of our time. Citizens, farmers, and funders will be inspired to use the tools presented in this important new book to transform degraded lands around the world into productive carbon-storing landscapes.

Somerset Maugham 2008 In 1916, William Somerset Maugham (1874-1965) travelled to the Pacific to research his novel "The Moon and Sixpence," based on the life of Paul Gauguin. This was the first of those journeys through the late-Imperial world of the 1920s and 1930s which were to establish Maugham forever in the popular imagination as the chronicler of the last days of colonialism in India, Southeast Asia, China and the Pacific, although the books on which this reputation rests represent only a fraction of his output.---Maugham reused elements of his Pacific diaries in "The Trembling of a Leaf" (1921), which contains one of his most recognized stories, "Rain," adapted to the stage by John Colton and Clemence Randolph in 1922.

The Orc of Many Answers Shane Michael Murray 2015-01-25 Down the mountain, one orc who asks too many questions tumbles, fleeing his past, with only an elven horse, a pair of boots, and an old book for company. Below the whole world awaits him, filled with humans, elves, trolls, and a thousand other monsters that make a habit of killing little orcs like Talking-Wind. Worse than any of them is the Lady of Firebrand Peak, the dragon who told Talking-Wind to stay put and wait to be eaten like a good orc. Orcs hate questions, but the one thing they hate more than orcs that ask too many questions is an orc looking for all the answers. The pursuit of dangerous knowledge only ever leads to trouble for the tribe. The Lady is not kind, nor is she forgiving. If Talking-Wind wishes to have any kind of chance to survive he will have to understand why dragons are

what they are, and what makes dragons do what dragons do. If he can stay one step ahead of the Lady of Firebrand Peak maybe, just maybe, he might even find a way to fight back. Talking-Wind will need answers. And a lot of them.

Heroics George Alec Effinger 2014-04-01 A coming-of-old-age novel from the Hugo Award-winning author of *When Gravity Falls*. "Engaging . . . spry, inventive, and often quite funny" (Kirkus Reviews). In HEROICS, Irene--like everyone in the future--struggles with boredom. Food, clothing, and all the necessities of human life have been taken care of. But, what does that leave of life itself? At eighty-two, Irene sets out on a pilgrimage across America hoping to find the answer. Along the way, she becomes transformed, both physically and by her interactions with other civilians all trying to cope with this new world. Filled with wry humor and fantastic symbolism, HEROICS mixes adventure and philosophy in a way both engrossing and entertaining. Of this book, friend and fellow writer Harlan Ellsion said, "It is the best Effinger yet...and for those of us who have been watching with amazement that is about as rich a compliment as you can expect from other envious authors. Damn him, he's good!" George Alec Effinger was a true master of satirical Science Fiction. Before his death in 2002, Effinger was a prolific novelist and short story writer, earning acclaim from his fans and peers, including a Nebula Award nomination for his first book *WHAT ENTROPHY MEANS TO ME*. In HEROICS, he revisits some of the themes and characters of that first book for

startling, funny and poignant results.

The Substance of Faith Clarence Jordan 2005-08-16 To read 'The Substance of Faith' is once again to experience Clarence Jordan at his best: the flashing wit that could illuminate even as it entertained, the blazing concern that knew how to lay its burden on the heart of even the casual listener, the biting irony that pierced sham and pretense, the depth of spirit that saw fresh meaning in the most familiar passage of Scripture. Within the pages of this book, you'll discover the basic themes of Clarence Jordan's life: "Incarnational Evangelism," the "God Movement," and his prophetic insight into the enemies of authentic faith, such as Mammon. Dallas Lee has brought all this together from what Clarence Jordan said in pulpit, classroom, and lecture hall.

The Noble Profession of Leaf Chasing
Mitchell J. Rycus 2010 In the late nineteenth century Austro-Hungarian Empire, two Jewish astronomy professors work tirelessly to unearth new academic research for their chosen field. But their participation in adultery, deception, and murder will follow them throughout time, weaving a complicated web into future

generations, and setting the stage for the age-old question, Are the sins of the fathers visited upon the sons? Years later, the professors' families having immigrated to Cleveland, Ohio, the old axiom comes to a strange and chilling climax. The grandsons of the astronomers supposedly influenced by ancient Jewish mysticism are murdered one allegedly at the hands of the other. Detective Sergeant Marty Kowalski investigates the murders, with the assistance of an astronomy professor and two of her students from the University of Michigan. Spending considerable time and meticulous effort, Kowalski slowly unravels the complicated past behind the two victims and unearths a shattering truth that will leave both families reeling. A fascinating blend of philosophy, history, and religion, *The Noble Profession of Leaf Chasing* delivers a compelling read.
