Mental Health Stigma in the Military Joie D. Acosta 2014 Despite the efforts of both the U.S. Department of Defense and the Veterans Health Administration to enhance mental health services, many service members are not regularly seeking needed care when they have mental health problems. Without appropriate treatment, these mental health problems can have wide-ranging and negative impacts on the quality of life and the social, emotional, and cognitive functioning of affected service members. The services have been actively engaged in developing policies, programs, and campaigns designed to reduce stigma and increase service members' help-seeking behavior. However, there has been no comprehensive assessment of these efforts' effectiveness and the extent to which they align with service members' needs or evidence-based practices. The goal of this research was to assess DoD's approach to stigma reduction, how well it is working and how it might be improved. To address these questions, RAND researchers used five complementary methods: (1) literature review, (2) a microsimulation modeling of costs, (3) interviews with program staff, (4) prospective policy analysis, and (5) an expert panel. The priorities outlined in this report identify ways in which program and policy development and research and evaluation can improve understanding of how best to efficiently and effectively provide needed treatment to service members with mental illness.

Airman's Manual U.s. Air Force 2013-10-07 This manual applies to Air Force active duty, Air Force Reserve, Air National Guard, emergency essential civilians and contract personnel. This manual contains the latest changed approved by the Air Force effective JUNE 24, 2011. It compiles existing war skill tactics, techniques, and procedures from many sources into a pocket-sized, quick reference guide. This manual implements AFPD 10-25, Emergency Management, and incorporates provisions of various International Agreements and Conventions, US Codes, DOD Directives, Chairman of the Joint Chiefs of Staff Command Instructions, Uniform Code of Military Justice, Air Force Instructions, Manuals, Pamphlets, Visual Aids and Handbooks; AF Occupational Safety and Health Standards, Technical Orders, Guides, and Concepts of Operation. As an expeditionary Airman you must stay ready to deploy anywhere in the world on short notice. This manual doesn't contain everything you must know. It doesn't focus on the integrated joint or multinational nature of combat operations. It doesn't replace regulations or local procedures you'll need to follow. This manual does, however, cover basic warfighting skills and points of knowledge with the intent to help you successfully complete the mission. The tasks outlined in this manual apply at both deployed and home station locations. Keep the Airman's Manual close to you; use it while training and exercising for contingencies and deployments. Refer to it often... you'll need it. Fly, Fight, and Win! AFPAM 10-100.

The Military Commander and The Law - Fourteen Edition (2017) Usaf Colonel Bryan D Watson 2018-07-18 The Military Commander and the Law is a publication of The Judge Advocate General's School. This publication is used as a deskbook for instruction at various commander courses at Air University. It also serves as a helpful reference guide for commanders in the field, providing general guidance and helping commanders to clarify issues and identify potential problem areas. As with any publication of secondary authority, this deskbook should not be used as the basis for action on specific cases. Primary authority, much of which is cited in this edition, should first be carefully reviewed. Finally, this deskbook does not serve as a substitute for advice from the staff judge advocate.

Strengthening U.S. Air Force Human Capital Management National Academies of Sciences, Engineering, and Medicine 2021-03-02 The USAir Force human capital management (HCM) system is not easily defined or mapped. It affects virtually every part of the Air Force because workforce policies, procedures, and processes impact all offices and organizations that include Airmen and responsibilities and relationships change regularly. To ensure the readiness of Airmen to fulfill the mission of the Air Force, strategic approaches are developed and issued through guidance and actions of the Office of the Deputy Chief of Staff for Manpower, Personnel and Services and the Office of the Assistant Secretary of the Air Force for Manpower and Reserve Affairs. Strengthening US Air Force Human Capital Management assesses and strengthens the various U.S. Air Force initiatives and programs working to improve person-job match and human capital management in coordinated support of optimal mission capability. This report considers the opportunities and challenges associated with related interests and needs across the USAF HCM system as a whole, and makes recommendations to inform improvements to USAF personnel selection and classification and other critical system components across career trajectories. Strengthening US Air Force Human Capital Management offers the Air Force a strategic approach, across a connected HCM system, to develop 21st century human capital capabilities essential for the success of 21st century Airmen.

The Military Commander and the Law Air Force Judge Advocate General School 2004-06 Today?s Air Force commanders face a wide-range of issues, many of which involve complex statutes, laws, regulations, and rules. Our commanders must deal with challenging legal matters ranging from military justice to environmental law to operations law. To assist commanders with these formidable tasks, we've created this helpful volume, The Military Commander and the Law.This deskbook contains a series of papers that give commanders a head start on the wide array of issues they will handle. Each article is intended to give a commander the basics in the law on any given subject. The papers are not intended to make the commander a legal expert or to resolve specific questions relating to any unique problem. Lance W. LordLieutenant General, United States Air ForceCommander, Air University **Chasing Success** United States Air Force Research Institute 2017-08-24 Discussions concerning civilian casualties in warfare continue to elicit very emotional responses among the public at large. Dr. Sarah Sewall, in Chasing Success: Air Force Efforts to Reduce Civilian Harm, depicts the US Air Force's efforts over the past twenty-plus years being at the vanguard of minimizing civilian harm in conflict while still effectively pursuing military objectives. When the Air Force Research Institute turned to Dr. Sewall to write this work, we understood that warfare is a messy business. At its core, when other elements of national power have failed to persuade and deter, warfare is about forcing one's will upon an adversary, including applying controlled violence. History is rife with examples of civilizations falling after their armies in the field are defeated and their cities are sacked, looted, and burned. The nature of modern warfare extracted an increasingly high toll on civilians as weapons became more deadly. As early as our own Civil War, the American military has become increasingly aware of civilian casualties-as has the international community, following the close of World War II. Nazi Germany's attacks on London utilizing terror weapons, such as the V-1 and V-2, and the Allied bombings of Dresden and Hiroshima demonstrated the totality of warfare in the modern era. The Geneva Conventions of 1949 attempted to define the basic rights of not just wartime prisoners but also to establish protection for civilians in and around a war zone. Warfare has become increasingly more complex. Some organizations, like the Islamic State in Iraq and the Levant (ISIL), are following the old historical examples in which they convert, enslave, or murder the civilian residents in conquered territories. In other conflicts, with the rise of insurgencies across the globe, standing militaries no longer meet on a battlefield where identifiable fronts and protected zones exist. In Iraq and Afghanistan, adversaries hiding within civilian populations have become the norm rather than the exception. Precision-guided munitions (PGM) have enabled more accurate delivery of kinetic effects, improving airpower's effectiveness while reducing risk to friendly forces. PGMs have also enabled airpower to reduce collateral damage and civilian casualties through more precise targeting. Yet PGMs, and the humans who deliver them, are not infallible, nor is the targeting information obtained during wartime perfect. Thus, unintended effects can be reduced but never completely eliminated. An open dialogue on such controversial issues as civilian vi casualties depicts the true strength of our Air Force and demonstrates the best attributes of a military operating inside a democratic society. It is in this spirit of open dialogue that we present Dr. Sewall's work on a very timely and emotionally charged subject.

Ten Propositions Regarding Space Power M. V. Smith 2020-11-17 This public domain reproduction in durable hardcover matte rides the coattails of Colonel Philip S. Meiningner's book, Ten Propositions Regarding Air Power. As the United States ponders its future regarding space operations, the time has come to frame similar propositions regarding spacepower. Specifically, this study seeks to answer the question, "What is the nature of spacepower?" It also test the aerospace integration school's hypothesis that spacepower is simply a continuation or extension of airpower. Two points come immediately to the forefront of this work. First, spacepower is different from airpower even though both share the vertical dimension of warfare. Second, space operations have matured to a point where valid and unique propositions regarding spacepower are identifiable. The ten propositions presented here do not represent a complete list. The method used to derive these propositions involved literary research that result in a long list. The list evolved over three years during numerous brainstorming with several space experts--most of them space weapons officers with theater and often combat experience--until the list was carefully refined into the ten most salient propositions. There were many ways to present the Ten Propositions Regarding Spacepower, but the author deferred to Meiningner's approach of citing each proposition as a thesis statement with supporting material immediately following. The objective of this work is to stimulate discussions and help those who do not yet understand or appreciate the nature of spacepower in modern warfare.

The Tongue and Quill Air Force 2019-10-11 The Tongue and Quill has been a valued Air Force resource for decades and many Airmen from our Total Force of uniformed and civilian members have contributed their talents to various editions over the years. This revision is built upon the foundation of governing directives and user's inputs from the unit level all the way up to Headquarters Air Force. A small team of Total Force Airmen from the Air University, the United States Air Force Academy, Headquarters Air Education and Training Command (AETC), the Air Force Reserve Command (AFRC), Air National Guard (ANG), and Headquarters Air Force compiled inputs from the field and rebuilt The Tongue and Quill to meet the needs of today's Airmen. The team put many hours into this effort over a span of almost two years to improve the content, relevance, and organization of material throughout this handbook. As the final files go to press it is the desire of The Tongue and Quill team to say thank you to every Airman who assisted in making this edition better; you have our sincere appreciation!

Combat Search and Rescue in Desert Storm Donald Whitcomb 2012-08-01 After Southeast Asia, analysts and force planners came to the realization that there was a fundamental difference between search and rescue (SAR) in a permissive area and in an area that was not permissive (i.e., under enemy control). This second condition is now called combat search and rescue or CSAR. At the time of Desert Storm, the two forms of rescue were defined thusly: Search and Rescue (SAR): Use of aircraft, surface craft, submarines, personnel, and equipment to locate and recover personnel in distress on land or at sea. Combat Search and Rescue (CSAR): A specialized SAR task performed by rescue-capable forces to effect recovery of distressed personnel from hostile territory during contingency operations or wartime.² The development of this rescue capability has been well established. Dr. Robert Futrell documented our efforts in Korea in The United States Air Force in Korea, 1950-1953. His work was followed by Dr. Earl Tilford's Search and Rescue in South east Asia, which eloquently chronicled the heroic efforts of the rescue crews in that conflict who brought back literally thousands of airmen. It extensively documented what is now considered the "golden age" of rescue. This work is meant to follow in those traditions and will focus on our CSAR efforts in the Persian Gulf War of 1991, or more specifically, the period of Operation Desert Storm, 17 January to 28 February 1991. Overall, CSAR in Desert Storm appears to have been a mixed bag. Because of advances in precision weaponry, Global Positioning System (GPS) technology, countermeasures, and training, relatively few coalition aircraft were shot down. Forty-three coalition aircraft were lost in combat, most over high-threat areas. Eighty-seven coalition airmen, soldiers, sailors, and marines were isolated in enemy or neutral territory. Of that total, 48 were killed, one is still listed as missing, 24 were immediately captured, and 14 were exposed in enemy territory. Of those who survived, most landed in areas controlled by enemy troops. Of the few actually rescueable, six were not rescued for a variety of reasons, but primarily because of limitations in CENTAF's ability to locate them accurately and in a timely manner.

Air Force Handbook 10-644 Survival Evasion Resistance Escape Operations, 27 March 2017 United States Government Us Air Force 2017-06-06 Air Force Handbook 10-644 Survival Evasion Resistance Escape (SERE) Operations 27 March 2017 This handbook describes the various environmental conditions affecting human survival, and describes isolated personnel (IP) activities necessary to survive during successful evasion or isolating events leading to successful recovery. It is the fundamental reference document providing guidance for any USAF service member who has the potential to become isolated; deviations require sound judgment and careful consideration. This publication provides considerations to be used in planning and execution for effective mission accomplishment of formal USAF Survival, Evasion, Resistance, and Escape (SERE) training, environmentally specific SERE training, and combat survival continuation training programs. The tactics, techniques, and procedures in this publication are recognized best practices presenting a solid foundation to assist USAF service members to maintain life and return with honor from isolating events.

Air Force System Safety Handbook - Costs, Objectives, Policy and Process, Risk Assessment, Flight Mishaps, Analysis Techniques, Contractors, Nuclear and Explosive Hazards, Biomedical Safety U. S. Military 2017-04-25 The Air Force System Safety Handbook was prepared as a resource document for program office system safety managers and system safety engineers. It is not designed to answer every question on the topic of system safety nor is it a cookbook that guarantees success. The handbook provides considerable insight to the general principles, objectives, and requirements of applying system safety concepts to the Air Force system acquisition and logistical support processes. Programs vary greatly in their scope and complexity, requiring a tailored system safety effort. Assigned to this difficult task are military and government personnel with varied education and experience backgrounds. These system safety practitioners need a comprehensive understanding of the system safety process and the complexities of applying it to a given program. This handbook will assist in providing much of the necessary information but additional, more detailed guidance will be required from the program office and their higher headquarters system safety experts. The ultimate objective of any organization within the Air Force is maximizing combat capability. One element in this maximizing process is protecting and conserving combat weapon systems and their support equipment. Preventing mishaps and reducing system losses is one important aspect of conserving these resources. System safety contributes to mishap prevention by minimizing system risks due to hazards consistent with other cost, schedule, and design requirements. The fundamental objective of system safety is to identify, eliminate or control, and document system hazards. 1.0 Introduction To System Safety * 2.0 System Safety Policy And Process * 3.0 Risk Assessment * 4.0 System Safety Program * 5.0 System Safety Program Plan (Sspp) * 6.0 Other Management Tasks (Ref 30) * 7.0 Design And Integration Tasks * 8.0 Design Evaluation, Compliance, And Verification * 9.0 Analysis Techniques * 10.0 System Safety Life-Cycle Activities * 11.0 Program Office System Safety * 12.0 Contracting For System Safety * 13.0 Evaluating Contractor System Safety * 14.0 Facilities System Safety * 15.0 Supplementary Requirements * 16.0 Nuclear Safety * 17.0 Explosives Safety * 18.0 System Safety In Logistics * 20.0 Test And Evaluation Safety

Treatment of Biological Warfare Agent Casualties United States Department of Defense 2004-10-01 This publication serves as a guide and a reference for trained members of the Armed Forces Medical Services and other medically qualified personnel on the recognition and treatment of biological warfare agent casualties. Information contained in this publication may also be relevant for the diagnosis and treatment of patients with naturally acquired diseases or illnesses due to pathogens with BW potential. This publication: (1) Classifies and describes potential BW agents. (2) Provides procedures for collecting, handling and labeling, shipping, and identifying potential BW agents. (3) Describes procedures for medical diagnosing, treating, and management of BW casualties. (4) Describes medical management and treatment in BW operations. The treatment modalities contained in this manual differ from standard textbooks in that they apply to BW agent exposures. The method of exposure for most BW agents is by inhalation; whereas, the endemic disease exposure (if applicable) is by other means. Some are by ingestion, some by arthropod bites, and others by dermal contact with the agent. This does not preclude service members becoming BW casualties by these means.

Air Force Handbook 1 U. S. Air Force 2018-07-17 This handbook implements AFD 36-22, Air Force Military Training. Information in this handbook is primarily from Air Force publications and contains a compilation of policies, procedures, and standards that guide Airmen's actions within the Profession of Arms. This handbook applies to the Regular Air Force, Air Force Reserve and Air National Guard. This handbook contains the basic information Airmen need to understand the professionalism required within the Profession of Arms. Attachment 1 contains references and supporting information used in this publication. This handbook is the sole source reference for the development of study guides to support the enlisted promotion system. Enlisted Airmen will use these study guide to prepare for their Promotion Fitness Examination (PFE) or United States Air Force Supervisory Examination (USAFSE).
