Tropical Food: Chemistry and Nutrition George Inglett 2012-12-02 Tropical Foods: Chemistry and Nutrition, Volume 1 covers the proceedings of an international conference on Tropical Foods: Chemistry and Nutrition, held in Honolulu, Hawaii on March 28-30, 1979. It is organized into 18 chapters that focus on the progress in the chemistry and nutrition of tropical foods. After briefly discussing a variety of foods harvested in the Pacific region, this book examines food's sensory characteristics for food quality determination, such as color and appearance, aroma, taste, and texture. The subsequent chapters focus on papaya fruit; the composition of seed; and the chemical and biochemical changes during processing and storage. The book also explains the occurrence, biosynthesis, and pharmacological properties of macrocyclic piperidine and piperidine alkaloids. A chapter describes the chemical and physical changes in harvested fruits at various maturities and their relation to fruit quality, with emphasis on prickly pear. This is followed by discussions on varieties of citrus, avocados, and mangoes of the southern United States and flavor characteristics of muscadine grape and guava. Methods such as solar drying technology, juice extraction processes, and industrial methods of

oxygen removal from grapefruit concentrate are also discussed. This book also covers the regulation of terpenoid contents of citrus fruits.

Considerable chapters present the production of sugar; cereals from various sources; and non-wheat flours and starches as bread supplements. The concluding chapters examine the nutritional value and toxic properties of yam and the acidity and raphides content of aroid root crops. A discussion on the high effectivity of water-insoluble endosperm pentosan of rye and wheat for bread production is included. This book is an invaluable resource for food scientists, technologists, and manufacturers; students; and those interested in the field.

The Porphyrins V1 David Dolphin 2012-12-02 The Porphyrins, Volume I: Structure and Synthesis, Part A is the first in a series of seven volumes and covers topics like nomenclature, purification, and structural determination of porphyrins, metalloporphyrins, and other related compounds. This volume serves to be a critical review of the topics covered and presents a complete and comprehensible discussion on the chemistry and biochemistry of porphyrins. The chapters in the text tackle the history and geochemistry of porphyrins and related systems. Also covered and discussed in the chapters is the synthesis of porphyrins from mono-, di-, and tetrapyrrolic intermediates. The isolation and modification of porphyrins from natural sources are also discussed. Other related compounds are also included, such as metallo-, aza-, and N-methylporphyrins, and their synthesis and properties. This book is a good introduction and reference for students studying in the fields of chemistry and biochemistry.

Drug Discovery and Drug Development Madhu Dikshit 2021-02-10 Over the years, India has attained a prominent global position in the manufacture of Generic Drugs. This success can be attributed to its synthetic organic chemistry and chemical engineering strengths, nurtured by the timely policies of the Government of India. However, breakthrough successes in New Drug Discovery have remained elusive, despite the brilliant and sustained efforts of many Indian researchers and Pharma establishments. The Indian National Science Academy thought it appropriate to document India's New Drug Discovery Research (NDDR) journey to date. Gathering contributions from prominent researchers in

the Indian Pharma Industry and Academia, this book highlights their efforts, achievements, and the status quo of Indian NDDR.

Fragment-Based Drug Discovery Steven Howard 2015-07-03 Fragment-based drug discovery is a rapidly evolving area of research, which has recently seen new applications in areas such as epigenetics, GPCRs and the identification of novel allosteric binding pockets. The first fragment-derived drug was recently approved for the treatment of melanoma. It is hoped that this approval is just the beginning of the many drugs yet to be discovered using this fascinating technique. This book is written from a Chemist's perspective and comprehensively assesses the impact of fragment-based drug discovery on a wide variety of areas of medicinal chemistry. It will prove to be an invaluable resource for medicinal chemists working in academia and industry, as well as anyone interested in novel drug discovery techniques.
