Smith and Aitkenhead's Textbook of Anaesthesia E-Book Jonathan Thompson 2019-04-09 This highly successful textbook is internationally renowned as a core text for trainee anaesthetists and is essential reading for candidates for the Fellowship of Royal College of Anaesthetists and similar examinations. The previous 6th edition was awarded First Prize at the BMJ Medical Book awards. The book provides full coverage of the sciences underpinning practice in anaesthesia, critical care and pain management together with details of clinical anaesthesia and perioperative care. In combining these aspects, anaesthetists new to the specialty have found the textbook particularly useful during the first few years of training as well as when preparing for professional examinations. It has also proved a valuable day-to-day reference for allied professionals such as operating department practitioners and physician assistants who need an understanding of clinical practice in anaesthesia and related specialties. The goal for this Seventh Edition has remained to equip the reader with the basic knowledge and practical considerations required to administer anaesthesia and perioperative care for a whole range of surgical conditions in patients with all common medical comorbidities. Reflecting the expanding role of anaesthesia beyond the operating theatre it also includes essential material related to safety and

quality assurance, consent, resuscitation, intensive care medicine, pre-hospital care and chronic pain management. This book's scope includes the full range of clinical practice, from anaesthetic equipment and pre-operative assessment through to post-operative care, local anaesthesia, anaesthesia for individual specialties and the management of chronic pain. The text covers the principles of pharmacology, anaesthetic agents and physics for the anaesthetist. Thirty new contributors provide a new perspective or contribute new chapters to this edition This edition has been restructured into four sections: Basic Sciences; Physics and Apparatus; Fundamentals of Anaesthesia and Perioperative Medicine; and Clinical Anaesthesia. Four new chapters have been added, both to reflect the UK postgraduate anaesthetic examination syllabus and changes in clinical practice. There are: The older patient; Anaesthesia in low and middle-income areas; Management of critical incidents; and Data analysis, clinical trials and statistics. This edition makes extensive use of new line drawings and diagrams and, for the first time, many of these are available in colour. Chapters have been extensively cross-referenced to aid the reader and avoid repetition to include substantially more information without increasing the overall size of the book.

Chan lead the way by bringing together current technology and clinical experience to provide a concise yet comprehensive overview on this ground-breaking technique. *Femtosecond Cataract Surgery: A Primer* is composed of clinical chapters written by 18 of the world's leading experts who have pioneering, hands-on experience performing the procedure paired with chapters on the technology of each of the 4 current systems. Intraoperative and clinical photographs further showcase the most up-to-date techniques and clinical experiences in each of the systems, as well as illustrations of their unique and common characteristics. Features include the following:

- New data presented in a companion table format to evaluate the different technologies
- Consistent representation of each system
- First-hand knowledge from expert international surgeons

Additionally, a comparison table has been constructed with the most recent information offering clear differentiation on the techniques and technologies of each system. The table also tracks each system's progression in the approval system in the United States and Europe. The final chapter in *Femtosecond Cataract Surgery: A Primer* serves as an update on the current investigations of presbyopia treatment with femtosecond

lasers. Providing a wealth of new data in a concise and organized format, Femtosecond Cataract Surgery: A Primer is an indispensable resource for ophthalmologists, cataract surgeons, optometrists, and other professionals in the eye care industry.
